CAUTION!

The supply voltage must not exceed $14V \pm 0.3V$. The minimum allowable supply voltage is 12V.

Connector XP1 is intended only for the antenna included with the device. Using any other antenna will result in damage to the board.

Connector XP6 is designed for the KELLER 4LD pressure sensor. Connecting any other device is strictly prohibited and may cause permanent board failure.

Communication with the device is performed through the UART interface (connector XP5) with a data line voltage range of 0 to 3.3V. If the data line voltage exceeds 5.3V, the device will automatically shut down. Applying higher voltages to the data line may cause irreversible damage.
